Selling CICD

Benefits of CICD to develope UdaPeople software

Benefits of CICD

- Easy to maintain and update feature: Once any step in the CICD pipeline is failed, the whole process will be stopped, it prevent the system get into critical falure status. If there is nothing wrong, the new feature will be release pretty quickly

- Reliability in testing product: Without CICD, when errors happen, it may not notify to the devoloper, and then, if many and small error add up, the system is not reliable and also improve product quality.

Benefits of CICD

- Reduce costs: Using CICD pipeline helps find and fix errors really fast, it can notify the developer the errors so they can fix it immediatly. Without CICD, if the system has an error, it is really hard to detect the problem.

- Faster release product: CICD pipeline will automate everything from the begining, means that we can reduce our workload to accelerate the code process
